

## 储罐生产线

### STORAGE TANK PRODUCTION LINE

- 罐体生产线从钢板下料、板材铣边、板材对接、卷筒、整形、组装、焊接、成型等先进的制造工艺和各工序自动化制造装备；开发一套远程集中控制系统，实现制造工艺编制、生产设计安排、生产过程监控管理等一体化控制。
- The tank body production line incorporates advanced manufacturing processes and automated manufacturing equipment across various stages such as steel plate cutting, edge milling, plate alignment, rolling, shaping, assembly, welding, and forming. Additionally, there's the development of a centralized remote control system aimed at achieving integrated control for manufacturing process planning, production design scheduling, and real-time monitoring and management of the production process.
